Tutorial for the S5560

Be sure to have a backup of the data on your phone!
Flashing a phone is a tricky business so be sure to know the risks!

What do you need for installation:
- The desired firmware
- The Multiloader application
- The Samsung S5560 USB-cable
- The S5560

Preparation:

1) Firmware
2) Multiloader 5.60

3) Samsung S5560 USB cable
4) How to get you phone into firmware mode:

Picture 1. Download Mode.

5) Connect your phone with your pc.
6) Before you start do a hard reset.

Link FW-List P-S-U
The application that will flash the new firmware to your mobile.
Link MultiLoader
Original cable.
Press and hold the following buttons.

(Picture. 1):
(1) Volume down
(2) Camera button.
(3) Power button.

Turn of your phone

Remove your MicroSD and SIM card, put the battery back in

Use the original USB cable 🙂
Enter the following code: *2767*3855#

Flashing:

1) Open the MultiLoader.
2) Extract the firmware onto your desktop.
3) Select the option (BRCM2133) in the control section of the MultiLoader.
4) Put a check in Boot Change, Full Download and Master Rom:

5) Click the Boot button and browse to the firmware folder on the desktop and select the file.

6) Do the same for all the other buttons (work the list from top to bottom, skip FOTA, Tune and ETC).

7) Be sure to select the LOW version for the Rsrc2 button
8) Check if your phone is correctly connected. If the Port Search is ready, click DOWNLOAD.
9) Leave your phone connected during the entire firmware installation.
10) When the MultiLoader says "All files complete", disconnect your phone, remove the battery, insert your MicroSD and SIM card
11) Turn on your phone, enter your PIN code.
Your phone is now updated!

BRCM2133

Boot Change
Full Download
Master Rom

Boot = BOOTFILES

Following groups are NOT required:
- Amss
- FOTA,
- Tune
- ETC

Always choose the LOW version.
Click on Port Search

Remove battery. Insert battery.
Flash is succesfully completed.
